

MOHAMMAD NOMAN

Full Stack Developer — Next.js · React · TypeScript · Node.js · MongoDB
Nagpur, MH | +917028106759 | mohammadnomancoc@gmail.com | [LinkedIn](#) | [GitHub](#)
Immediate Joiner · Open to Relocate

Summary

Full Stack Developer with hands-on, end-to-end ownership of production features — from UI to REST API to database schema — across React, TypeScript, Node.js/Express, and MongoDB/Firebase. Shipped a layered EMS backend (RBAC, geofenced attendance, automated document generation) and an AI-powered diagnostic platform combining a PyTorch computer-vision model with an explainable-AI visualization layer and automated reporting. Comfortable working directly with minimal oversight, writing typed, maintainable code, and taking a feature from schema design through deployment.

Skills

Languages: TypeScript, JavaScript (ES6+), Java, Python
Web & Frontend: React.js, Next.js, Redux, Tailwind CSS, Framer Motion, HTML5/CSS3
Backend & APIs: Node.js, Express.js, REST API Design, JWT Authentication, Socket.io, Vercel Serverless Functions, Flask
Database & Cloud: MongoDB, Firebase, Supabase (PostgreSQL), MySQL 8, SQLAlchemy ORM
AI/ML: PyTorch, OpenCV, Grad-CAM (Explainable AI), ResNet18, NumPy
Tools & Practices: Git/GitHub, Docker, Postman, RBAC, Layered Architecture, Vercel, Netlify

Experience

Full Stack Developer Intern — Chetan's Royals Webtech Pvt. Ltd., Nagpur, MH

Employee Management System (EMS) **Dec 2025 - Present**
Stack: React · TypeScript · Node.js · Firebase (Auth + Firestore) · Vercel Serverless Functions

- Architected a layered service structure (route → service → data-access) around Firestore, replacing wildcard security rules with production-grade RBAC — closing a vulnerability that exposed restricted employee data to any authenticated user.
- Built a biometric face-recognition attendance system with Haversine-based GPS geofencing, validating location and identity server-side before writing check-in records.
- Shipped a drag-and-drop ID card designer with automated PDF generation, resolving Firestore write failures through custom ID serialization — reducing failed writes to zero in testing.

Hair-Care Brand (E-commerce Platform)

Stack: React · Vite · REST APIs · Cloudinary · Google Tag Manager · Meta Pixel

- Built a "Watch & Shop" video-commerce feature (React, IntersectionObserver) backed by a Cloudinary-integrated REST API, giving admins a self-serve panel to manage shoppable video content.
- Implemented a COD checkout flow and promo/coupon evaluation engine across a 27K-line, 12-table production codebase, shipped without breaking existing checkout paths.

Luxury Resort & Restaurant Platform

Stack: React · TypeScript · Node.js · Express · Firebase (Firestore) · Socket.io

- Designed and built an 18-endpoint REST API (Node.js/Express, Firestore) with dual-token JWT authentication, plus a custom Axios interceptor that queues requests during token refresh — eliminating race conditions during expiry.
- Owned the booking/reservation engine end to end, from Firestore schema through API to a secure admin panel used for real-time content management.

Projects

AI-Driven Alzheimer's Diagnostic Platform

Stack: React · Flask · PyTorch · OpenCV · SQLAlchemy · ReportLab

- Built an end-to-end diagnostic web app — UI, REST API, and database schema — integrating a PyTorch ResNet18 model that classifies brain MRI scans across four dementia stages.
- Designed a custom Grad-CAM explainability pipeline, hooking into the model's final convolutional layer to render diagnostic heatmaps, and an automated ReportLab pipeline generating clinical PDF reports in under 30 seconds.

À Faire — Productivity & Goal Tracker SPA

Stack: React · TypeScript · Supabase (PostgreSQL+Auth+RLS) · Framer Motion **Dec 2025 - Jan 2026**

- Built a dual-planner app (timeline + calendar) with bidirectional task/goal sync and deduplicated push reminders via the Web Notifications API, backed by Row-Level-Security-scoped Supabase tables.

WhereTF — Campus Lost & Found

Stack: Node.js · Express · React 18 · MongoDB · Socket.io **Feb 2025 - Apr 2025**

- Solo-designed and built an 18-endpoint REST API with JWT auth and a MongoDB schema, enabling students to report, browse, and claim lost/found items in real time.

Education

B.Tech — Computer Science and Engineering · Anjuman College of Engineering & Technology, Nagpur, MH · 2022-2026 · Graduated May 2026 · CGPA: 6.79/10
HSC (CBSE): Al Irfan Secondary School, Aurangabad · 2020-2022 · 85%
SSC (CBSE): St. Vincent Pallotti School, Nagpur · 2019-2020 · 78%
